

Q

I'm trying to export my project from TVPaint to a Quicktime movie and it will only export the first frame of the animation. I've tried several different things but it's not working for me. Any thoughts?

A

It could be that the "key frame every" box in the compression settings might be checked, so you have to uncheck it.

This Might be the issue:

Export as: *Animation* .

- Format: Quicktime, Mode: RGB ,
- Compression: H.264 , 24 FPS , "High" or "Best" Quality.
- **(Uncheck the box next to "Key Frame Every \_\_\_\_ Frame" ) ,**
- Size of exported project: 640 x 480 (or 720 X 540),
- Frame Rate: 24 FPS ,
- Pixel Aspect Ratio: 1.000,
- Field: Progressive
